

Clearly powerful. Powerfully clear.

Radius™ is the only hearing instrument built with cutting-edge nFusion™ Technology, offering superior sound quality, comfort, convenience and virtually no feedback.

RADIUS 12 POWER PLUS BTE

The Radius 12 Power Plus BTE for more power and features.

More power used to mean fewer advanced features in hearing instruments. With nFusion Technology, now people with severe hearing loss get the amplification they need and sophisticated features like feedback cancellation and automatic adaptation to changing environments. The Radius 12 Power Plus BTE has an advanced telephone solution and a unique output compression control to help patients with some of the most severe hearing losses.

With Active Feedback Intercept (AFI) you'll experience better sound quality, virtually no feedback, and more perception of soft sounds. Standard on the Radius 12 Power Plus BTE, Directional Speech Detector focuses on the voices you want to hear in noisy environments then shifts automatically as you move to quieter surroundings.

We call it the Radius 12 Power Plus BTE because this is simply the most powerful digital directional hearing aid on the market today.

Designed for patients with severe to profound hearing loss, this powerful device gives you better, clearer hearing, even at extremely high levels of gain. And like all our other Radius products, the Power Plus is loaded with advanced features, including:

Active Feedback Intercept (AFI) – the most effective feedback erasure system ever developed. AFI uses an entirely new patent-pending method that actually moves nuisance signals in time, so not only does the feedback virtually disappear, there are no irritating sound artifacts left behind.

Environmental Adaptation – an advanced system with noise suppression – that automatically manages and classifies different sound environments so you can move seamlessly from one listening experience to another without making an adjustment.

Directional Speech Detector (DSD) – directional performance even in the noisiest of conditions. This technology continuously monitors environments and adjusts for better speech intelligibility, even in crowds.

Automatic Telephone Response – a first-of-its-kind nanotech switch that senses an analog telephone signal the moment the receiver is lifted to the ear.

Micro-Tech's nFusion Technology

represents a groundbreaking advance in better hearing. The first instrument ever to use nanoscience in its design, Radius offers features never before possible: switching so automatic it responds to even the most dramatic environmental changes, effective feedback elimination, and a noticeably natural sound quality.

The best technology is designed with you in mind. That's nFusion. Find out how the powerful circuit inside Radius can bring the world of natural hearing back to you.

Located in Minneapolis, Minnesota, Micro-Tech was founded in 1986 on the philosophy that superior sound quality can be achieved while providing patients the small, stylish hearing instruments they desire. Today, Micro-Tech has earned a reputation as an industry leader in hearing instrument technology and the treatment of hearing loss.
