

# Smart technology, natural hearing

Radius™, the only hearing aid built with nFusion™ Technology, offers a full line of open-fit options using airflow for superior comfort and a natural feel.

**OPEN SOLUTIONS**

# You deserve the smartest, most comfortable hearing aid available. That's Radius.

Advanced technology doesn't mean you have to make compromises when it comes to style, fit, or comfort. Our line of open-fit devices was developed across a broad range of hearing needs and preferences. Each one is configured to allow airflow through the ear canal, reducing occlusion (that "plugged-up" feeling), and discomfort.

Radius open-fit hearing aids offer a range of features not available in any other product, including:

**Active Feedback Intercept** — Rated the industry's most powerful and effective feedback canceller, AFI eliminates whistling, buzzing, and sound artifacts.

**Smart Switching** — Advanced technology makes Radius intuitive, so the hearing aid itself switches seamlessly as you move from one sound environment to the next, improving comfort in a variety of situations.

**Directional Speech Detector** — Automatically adapts to your environment to improve speech intelligibility, even in noise.

**Precision Fitting** — A quick, accurate fit using real sounds and sophisticated technology that programs the device specifically for you.

## Radius Open Fit Solutions

### Radius RIC

One of the most popular hearing aid styles available today, this receiver-in-the-canal device is small, discreet, and incredibly quick-to-fit; perfect for many first-time wearers.

### Radius OTE

A light, comfortable on-the-ear instrument that offers an optional case style with directional hearing; appropriate for mild to moderate hearing loss.

### Radius BTE

A powerhouse device that provides maximum amplification along with thin, transparent tubing and soft, vented open-fit earbuds; can be used for mild to severe high-frequency hearing loss.

### Radius CIC

Our unique completely-in-the canal device stays hidden from the world but has an extra-large vent that promotes air flow; ideal for patients with mild to moderate hearing loss.

## Why Radius?

Because only Radius instruments use the latest technology to provide better, clearer hearing and better feedback cancellation than anything that's come before. Our Active Feedback Intercept has been studied and continually proves to be more effective at removing feedback than any other system.

Natural hearing depends on many factors: the comfort of the device itself, the accuracy of the fit, and the clarity it gives you as a backdrop for the sounds of your life. Only Radius can give you all of this and more.

**Radius: the clear choice.**
